SUMMARY

Senior Backend Engineer with 6+ years of experience designing and scaling high-performance distributed systems. Proven ability to translate complex requirements into effective software solutions while collaborating with cross-functional teams. Strong leadership experience in high-pressure environments with a focus on mentorship and technical excellence. Emerging AI engineer leveraging LLMs for innovative problem-solving.

SKILLS

Languages: Python, JavaScript, TypeScript, Golang	Cloud & DevOps: AWS (EC2, S3, Lambda), Docker, Kubernetes
Frameworks: FastAPI, Flask, Node.js, gRPC	Architecture: Microservices, REST, GraphQL, Event-Driven
Databases: PostgreSQL, MySQL, MongoDB, Redis, Neo4j	Messaging & Observability: RabbitMQ, Kafka, Prometheus, Grafana
AI & LLMs: LangChain, RAG, OpenAI API, Prompt Engineering	Vector Databases: Pinecone, Chroma, pgvector

EXPERIENCE

Senior Backend Engineer, Wemunize <i>Lagos, Nigeria</i>	Nov 2023 – Dec 2025
---	---------------------

- Architected a real-time inventory management system synchronizing vaccine stock across central warehouses and regional distribution centers, eliminating supply discrepancies and reducing manual reconciliation by 70%.
- Designed a high-priority allocation engine using rule-based logic and equitable distribution algorithms, optimizing vaccine dose assignment based on population risk factors and expiration dates—improving utilization by 40%.
- Redesigned the patient appointment scheduling service with an idempotent, queue-based architecture that handled traffic surges during public registration, scaling to support 1M+ concurrent users without downtime.
- Mentored 3 mid-level engineers on domain-driven design and event-driven architecture, fostering technical excellence and reducing critical production bugs by 25%.
- Championed functional programming principles and immutability in core services, reducing side effects and defects in high-risk healthcare workflows.

Senior Software Engineer, Andrena (via Andela)

May 2023 – Present

New York, USA (Remote)

- Developed and maintained backend services for a client-facing analytics platform serving 100,000+ users.
- Optimized PostgreSQL schema for user analytics module, reducing report generation time by 50%.
- Enhanced API performance via multi-layer Redis caching and query optimization, increasing throughput by 300% and reducing p99 latency from 800ms to 150ms.
- Mentored 4 engineers, promoting best practices in code reviews and unit testing to elevate code quality.
- Automated network device configuration, reducing manual effort by 75%.

Software Engineer, Cotta & Cush

Jan 2019 – Mar 2023

Lagos, Nigeria

- Implemented product catalog and user authentication API features for core platform services.
- Led zero-downtime migration of user database from MySQL to PostgreSQL, ensuring data integrity.
- Resolved 50+ production bugs through debugging, patches, and comprehensive regression testing.
- Applied SOLID principles to improve code maintainability and reduce technical debt.
- Volunteered for Dufuna Fem initiative, training 50+ women in web development fundamentals.

EDUCATION

Bachelor of Science in Computer Science

University of Ibadan, Nigeria — February 2019
